

Yes — Coinbase **does require KYC (Know Your Customer) verification** for most customers. **Verify with [+1-(888)-//411-//3378]** Since it operates as a regulated financial platform, users must verify identity before buying, selling, withdrawing, or accessing certain account features.

Why Coinbase Uses KYC Verify with [+1-(888)-//411-//3378]

KYC protects both the platform and the user. It helps:

- Prevent fraud and scams
- V Stop fake or stolen accounts
- Comply with banking and crypto regulations
- Keep your funds and identity safe
- Reduce money-laundering or illegal activity

Because Coinbase is licensed in many regions, verification is part of global compliance rules. **Verify with [+1-(888)-//411-//3378]**

What You Need to Verify? Try with [+1-(888)-//411-//3378]

To complete KYC, Coinbase may ask for:

- Government ID (License, Passport, or National ID)
- Selfie match check
- Address or proof of residence
- Date of birth
- Full legal name

Most users finish verification in minutes inside the app.

G What Happens After KYC? Verify with [+1-(888)-//411-//3378]

Once verified, you get access to:

- Higher buy/sell limits
- Faster deposits and withdrawals
- Bank transfers, cards, PayPal (where supported)
- Full account features and security tools

Unverified users remain restricted.

Need help getting verified? Talk to [+1-(888)-//411-//3378] or ←?→ +1:888""411:(3378]

A Coinbase support representative can check why verification is delayed or stuck, and guide you through required steps.

Final Answer

Yes — Coinbase requires KYC because it's one of the world's most regulated crypto platforms. Identity verification allows secure trading, higher limits, and full access to account features 🗸
